Summary

Motivated Computer Science student with strong interest in software development and problem solving. Experienced in Python programming, database integration, and GUI application development. Skilled in building practical projects such as movie search systems and implementing operating system algorithms. Seeking a tech internship to apply programming and analytical skills to real-world applications.

Technical Skills

Programming Languages: Python, Java, SQL, C++

Database: MySQL

Projects

NeuroDetect: AI-Powered Alzheimer's Diagnosis |

Technologies: Python, TensorFlow, Keras, Scikit-learn, VGG16, SVM, Pandas

- Developed a dual-modality machine learning framework to diagnose Alzheimer's disease using MRI brain scans and structured clinical data.
- Built and fine-tuned a VGG16-based Convolutional Neural Network (CNN) to classify MRI images into four stages: Non-Demented, Very Mild, Mild, and Moderate.
- Implemented a Support Vector Machine (SVM) model to predict disease stage using clinical features such as MMSE and CDR scores, achieving ~93% accuracy.
- Integrated both prediction models into a unified interface to enable cross-verification of results and improve diagnostic reliability.

Content-Based Movie Recommendation System

[GitHub Link]

Technologies: Python, Scikit-learn, Pandas, Random Forest, Logistic Regression

- Developed a content-based recommendation system that suggests movies by filtering a dataset based on user input for year, genre, and country.
- Conducted a comparative analysis by training and evaluating Logistic Regression (86.24% accuracy) and Random Forest (98.63% accuracy) models.
- Engineered a data preprocessing pipeline using Pandas and Label Encoder to transform categorical features into a machine-readable format.

Education

VIT Bhopal University

B.Tech in Computer Science and Engineering (AI&ML)

CGPA: 7.76 / 10.0

Sehore, MP

Aug 2023 – May 2027
